Pathways for children

Caring for Today, Teaching for Tomorrow

The children at Fuller Head Start decided to build a big structure. They decided how tall it was going to be and what it was going to look like:

-They wanted it taller than themselves, so they made it 53 inches high. Using yardstick rulers and predictions, they achieved their goal.

-They wanted it to look like a bridge, so they chose a picture that from the computer and voted on the final choice.

-They chose a base and found a strong, flat box that would be perfect for the project, because if the base isn't strong it would "timberrrrrrrrrrr".

-They picked colors to paint their structure: red and blue were their favorite.

-They rolled and rolled newspapers for days, using all their fine-motor skills.

Finally, the day came when they got to put it all together with 4 rolls of tape and a lot of collaboration and ingenuity.

Their masterpiece was complete!
